

# 广西假糙苏属植物增补

严克俭\*, 方 鼎

(广西中医药研究院, 南宁 530022)

**摘要:** 报道假糙苏属(*Paraphlomis*)植物在中国广西 2 个新分类群和 2 个新记录种。2 个新分类群是翅柄假糙苏(*P. javanica* (Blume) Prain var. *pteropoda* D. Fang & K. J. Yan)和白脉狭叶假糙苏(*P. javanica* (Blume) Prain var. *angustifolia* (C. Y. Wu) C. Y. Wu & H. W. Li f. *albinervia* D. Fang & K. J. Yan)。2 个新记录种是刚毛假糙苏(*P. hispida* C. Y. Wu)和近革叶假糙苏(*P. subcoriacea* C. Y. Wu ex H. W. Li)。

**关键词:** 假糙苏属; 新分类群; 新记录种; 广西; 中国

## A Supplement to the *Paraphlomis* (Lamiaceae) from Guangxi, China

YAN Ke-jian, FANG Ding

(Guangxi Institute of Traditional Medical & Pharmaceutical Sciences, Nanning 530022, China)

**Abstract:** Two new taxa and two newly recorded species of the *Paraphlomis* from Guangxi, China are reported. The two new taxa are *P. javanica* (Blume) Prain var. *pteropoda* D. Fang & K. J. Yan and *P. javanica* (Blume) Prain var. *angustifolia* (C. Y. Wu) C. Y. Wu & H. W. Li f. *albinervia* D. Fang & K. J. Yan. The two newly recorded species are *P. hispida* C. Y. Wu and *P. subcoriacea* C. Y. Wu ex H. W. Li.

**Key words:** *Paraphlomis*; New taxa; New records; Guangxi; China

*Paraphlomis* (Prain) Prain is a small genus, about 24 species, mainly distributed in India, SE Asia, 23 species in China<sup>[1-3]</sup>. Based on examination of specimens housed at GXMI, two new taxa and two newly recorded species of the *Paraphlomis* from Guangxi, China are recognized.

### 1 翅柄假糙苏 新变种

*Paraphlomis javanica* (Blume) Prain var. *pteropoda* D. Fang & K. J. Yan, var. nov.

A var. *javanica* differt foliis basi late cuneatis vel obtusis decursivis sessilibus.

Guangxi(广西): Bose(百色), Daleng(大楞), Longhe(龙和), alt. ca. 420 m, in valey, 1977-06-04, X. C. Lu(卢信昌)3-22054 (holotype, GXMI); *ibid.*, 1984-06-09 X. X. Chen(陈秀香) 36994 (GXMI).

This new variety differs from var. *javanica* in the shape of its leaf bases being broadly cuneate or

obtuse, decurrent and sessile.

### 2 白脉狭叶假糙苏 新变型

*Paraphlomis javanica* (Blume) Prain var. *angustifolia* (C. Y. Wu) C. Y. Wu & H. W. Li f. *albinervia* D. Fang & K. J. Yan, f. nov.

A f. *angustifolia* recedit foliorum costis cum nervis lateralibus supra albenti-lineatis ornatis.

Guangxi(广西): Fengshan(凤山), Jinya(金牙), limestone hill, medicinal, 1977-09-24, Fengshan Exped.(凤山队) 4-7-6(holotype, GXMI).

This new form differs from f. *angustifolia* in its whitish color on both midribs and secondary veins at the top of the leaves.

### 3 刚毛假糙苏

*Paraphlomis hispida* C. Y. Wu in Acta Phytotax. Sin. 8(1): 39, pl. 4: 14~18, 1959; H. W. Li in *ibid.* 10
